Avian Influenza Report

Avian Influenza Report *is a weekly report produced by the Surveillance Division of the Communicable Disease Branch of the Centre for Health Protection. This report highlights global avian influenza activity in humans and birds.*

VOLUME 22, NUMBER 47
Reporting period: November 15, 2026 – November 21, 2026 (Week 47)
(Published on November 24, 2026)

Summary

1. Since the previous issue of the Avian Influenza Report (AIR), two new human cases of avian influenza A(H5N1) from the Chinese Mainland and the United States of America (USA) were reported by the World Health Organization (WHO) and the US Centers for Disease Control and Prevention (CDC), respectively, on November 20, 2026 (refer to Table 2 for details). From 2016 to 2025, 0 to 81 confirmed human cases of avian influenza A(H5N1) were reported to WHO annually (according to onset date).*

2. Since the previous issue of AIR, there have been no new human cases of avian influenza A(H5N6). Since 2014 (as of November 21, 2026), there have been 94 human cases of avian influenza A(H5N6) reported globally, and 93 of them occurred in the Chinese Mainland. The latest case was reported on May 8, 2026.

3. Since the previous issue of AIR, there have been no new human cases of avian influenza A(H7N9). Since March 2013 (as of November 21, 2026), there has been a total of 1568 human cases of avian influenza A(H7N9) reported globally (all were reported in the seven waves between 2013 and September 2019). The latest case was reported on April 5, 2019.

* Since November 21, 2012, WHO has only published information on human cases of avian influenza A(H5N1) infection in its "Influenza at the Human–Animal Interface: Monthly Risk Assessment Summary". Only cases of human infection with H5N1 involved in events that are unusual or associated with potential increased risks will be reported in Disease Outbreak News. The latest report was published in October 2026.

This week's highlights

(Sources: World Health Organization (WHO), Overseas health authorities, National Health Commission (NHC) of the People's Republic of China, Chinese Mainland health authorities, Ministry of Agriculture of the People's Republic of China, Centre for Health Protection (CHP) and World Organisation for Animal Health (WOAH; Founded as OIE))

Table 1. **Hong Kong: Confirmed human cases of avian influenza A(H5N1 / H5N6 / H7N9) since previous issue of AIR**

	No. of H5 cases (No. of deaths)	No. of H7N9 cases (No. of deaths)	Details
In this reporting period	0(0)	0(0)	-

Table 2. **Outside Hong Kong: Confirmed human cases of avian influenza A(H5N1 / H5N6 / H7N9) since previous issue of AIR**

	Place of occurrence	No. of cases (No. of deaths)	Details
In this reporting period	**Chinese Mainland**	1(0)	**Avian influenza A(H5N1)** ▪ **Guangxi Zhuang Autonomous Region:** ▫ This is an imported case from Vietnam involving an adult male who regularly travelled to the Chinese Mainland for commercial activities. ▫ He developed symptoms on 1 November 2026 and was subsequently found to have cough, nasal congestion and rhinorrhoea during health screening at Dongxing Port on 2 November. As of 4 November, he was clinically stable. ▫ He reported no known exposure to poultry, other potentially infected animals or contaminated environments. ▫ Two household contacts in Vietnam remained asymptomatic and tested negative for influenza A, including subtype H5.
	USA	1(0)	**Avian influenza A(H5N1)** ▪ **Oregon State:** ▫ This is the first human case of avian influenza A(H5N1) associated with

	Place of occurrence	No. of cases (No. of deaths)	Details
			infected dairy cattle in Oregon. ▫ The case involved a worker aged 18 years or above at a commercial dairy cattle farm where H5N1 virus had been detected in cows. ▫ The patient developed eye irritation during the week ending 14 November 2026 and did not require hospitalisation. ▫ Genetic sequences of the virus from the case cluster with recent human cases in Washington.

Table 3. **Confirmed human cases of avian influenza A(H5N1) reported to WHO / Overseas health authorities / NHC since 2003 (by onset date)** [§]

Year	Cases	Deaths	Case fatality rate
2003	4	4	100%
2004	46	32	69.6%
2005	98	43	43.9%
2006	115	79	68.7%
2007	88	59	67.0%
2008	44	33	75.0%
2009	73	32	43.8%
2010	48	24	50.0%
2011	62	34	54.8%
2012	32	20	62.5%
2013	39	25	64.1%
2014	52	22	42.3%
2015	145	42	29.0%
2016	10	3	30.0%
2017	4	2	50.0%
2018	0	0	0%
2019	1	1	100%
2020	1	0	0%
2021	2	1	50.0%
2022	6	1	16.7%
2023	12	4	33.3%
2024*	81	4	4.9%
2025	31	12	38.7%
2026	16	3	18.8%
Overall	1010	480	47.5%

[§] Further breakdown by countries is available at WHO website

*Including laboratory-confirmed cases of avian influenza A(H5) reported by the United States Centers for Disease Control and Prevention (US CDC) in 2024.

Table 4. **Confirmed human cases of avian influenza A(H5N1) reported to WHO / Overseas health authorities / NHC since 2003 (by date of reporting)**

Countries /Areas	Cumulative no. of cases (November 2003 to November 2026)	No. of recent cases (July 2026 to November 2026)
Australia	1	0
Azerbaijan	8	0
Bangladesh	16	2
Cambodia	96	2

Table 7. **Confirmed human cases of avian influenza A infections other than avian influenza A(H5N1 / H5N6 / H7N9) reported in the past 6 months (as of November 23, 2026)**

	Place of occurrence	No. of cases (No. of deaths)	Details
In this reporting period	**Chinese Mainland**	2(0)	**Avian influenza A(H9N2):** ▪ **Henan Province:** ▫ A two-year-old boy with onset on October 24, 2026. ▪ **Hunan Province:** ▫ A five-year-old boy with onset on October 20, 2026.
Previously reported cases (onset/ reported in the past 6 months)	**Chinese Mainland**	23(0)	**Avian influenza A(H9N2):** ▪ **Anhui Province:** ▫ A three-year-old boy with onset on August 3, 2026. ▪ **Beijing:** ▫ A six-year-old girl with onset on August 15, 2026. ▪ **Gansu Province:** ▫ A three-year-old girl with onset on July 11, 2026. ▪ **Guangdong Province:** ▫ A one-year-old girl with onset on June 12, 2026. ▫ A 44-year-old man with onset on June 26, 2026. ▫ A one-year-old girl with onset on September 7, 2026. ▪ **Guangxi Zhuang Autonomous Region:** ▫ A 64-year-old woman with onset on May

	Place of occurrence	No. of cases (No. of deaths)	Details
			4, 2026. ▫ A two-year-old girl with onset on May 31, 2026. ▫ A four-year-old boy with onset on June 26, 2026. ▫ A two-year-old boy with onset on August 23, 2026. ▫ A nine-year-old girl with onset on October 13, 2026. ▪ **Guizhou Province:** ▫ A four-year-old boy with onset on September 20, 2026. ▪ **Henan Province:** ▫ A one-year-old girl with onset on August 30, 2026. ▫ A 68-year-old man with onset on September 17, 2026. ▪ **Hubei Province:** ▫ A two-year-old boy with onset on September 22, 2026. ▪ **Jiangsu Province:** ▫ A four-year-old boy with onset on June 22, 2026. ▫ A 12-year-old boy with onset on July 6, 2026. ▪ **Jiangxi Province:** ▫ A 72-year-old woman with onset on July 5, 2026. ▫ A 77-year-old woman with onset on September 16, 2026. ▪ **Liaoning Province:** ▫ A seven-year-old boy with onset on September 20, 2026. ▪ **Yunnan Province:** ▫ A four-year-old boy with onset on May 17, 2026. ▫ A 58-year-old woman with onset on July 13, 2026. ▫ A two-year-old girl with onset on July 28,

	Place of occurrence	No. of cases (No. of deaths)	Details
			2026.
	Hong Kong, China	1(0)	**Avian influenza A(H9N2):** ▪ The case involved a two-year-old boy with onset on June 9, 2026**.** ▪ The patient was admitted for treatment on June 10, 2026, and has now recovered. ▪ Epidemiological investigations revealed the case likely had indirect exposure to contaminated environment at a fresh provision shop selling live poultry in a wet market. ▪ One sample collected from a metal tray placed at the bottom of a live chicken cage inside the shop for collecting chicken droppings tested positive for the H9 avian influenza virus. The remaining 16 environmental samples tested negative. ▪ Whole genome sequencing and analysis of the patient's clinical specimens confirmed that all of the virus genes were avian in origin and no significant genetic variations were detected. ▪ All identified contacts remained asymptomatic.

Table 8. **Hong Kong: Confirmed reports of avian influenza A(H5) or avian influenza A(H7N9) in poultry / wild birds / environmental samples since 2015**

	No. of reports of H5 in poultry / wild birds / environmental samples	No. of reports of H7N9 in poultry / wild birds / environmental samples	Details
In this reporting period	0	0	-
Previously reported cases since 2015 (before this reporting period)	31*	1#	-

* Carcass of a peregrine falcon found in Yuen Long on April 9, 2015 (H5N6)
Carcass of an oriental magpie robin found in Sai Kung on April 29, 2015 (H5N6)
Carcass of an oriental magpie robin found in Kwai Chung on November 17, 2015 (H5N6)
Carcass of a great egret found in Wong Tai Sin on December 31, 2015 (H5N6).
Chicken carcass found in Tuen Mun on February 14, 2016 (H5N6)
Chicken carcass found in Tai O on February 18, 2016 (H5N6)
Samples of faecal droppings collected at Mai Po Nature Reserve on November 25, 2016 (H5N6)

A sample of faecal droppings collected at Mai Po Nature Reserve on November 30, 2016 (H5N6)
A dead red-whiskered bulbul collected at Kowloon City on April 7, 2017 (H5N6)
A dead oriental magpie robin found in Tseung Kwan O on December 21, 2017 (H5N6)
A dead black-faced spoonbill found in the Hong Kong Wetland Park in Tin Shui Wai on December 21, 2017 (H5N6)
An environmental swab of a chopping board and skin swabs of a chilled duck sample taken from a fresh provision shop in Wan Chai on January 2 & January 9, 2018 (H5N6)
An oropharyngeal swab from a batch of chilled chicken taken at a fresh provision shop in Mong Kok, reported on January 23, 2018 (H5N6)
A black-headed gull carcass found in Ngau Hom Tsuen, Lau Fau Shan, reported on February 9, 2018 (H5N6)
A dead crested myna found at Kun Lung Wai, Fanling reported on April 9, 2018 (H5N6)
A swab sample taken from a bird cage housing a hill myna at a pet bird shop in Yuen Po Street Bird Garden in Mong Kok on April 7, 2018 (H5N6)
Samples of faecal droppings collected at Mai Po Nature Reserve reported on January 14, 2021 (H5N8)
Carcass of a peregrine falcon found in Wu Kai Sha reported on February 1, 2021 (H5N8)
Carcass of a black-faced spoonbill found in the Hong Kong Wetland Park in Tin Shui Wai reported on December 20, 2021 (H5N1)
Carcass of a Eurasian Curlew found in the Mai Po Nature Reserve reported on January 26, 2022 (H5N1)
Environmental sample collected from Mai Po Nature Reserve reported on November 16, 2022 (H5N1)
Carcass of a black-faced spoonbill found in Mai Po Nature Reserve reported on November 30, 2022 (H5N1)
Black-faced spoonbill carcass found in Hong Kong Wetland Park reported on December 12, 2022 (H5N1)
Environmental sample from Mai Po Nature Reserve reported on December 8, 2023 (H5N1)
Eurasian teal carcass found in the Mai Po Nature Reserve reported on December 21, 2023 (H5N1)
Pin-tailed snipe and Eurasian teal carcasses found in the Hong Kong Wetland Park reported on December 28, 2023 (H5N1)
Eurasian wigeon carcass found in the Hong Kong Wetland Park, reported on January 5, 2024 (H5N1)
Eurasian wigeon sample collected from the Hong Kong Wetland Park, reported on January 5, 2024 (H5N1)
Environmental sample collected from Mai Po Nature Reserve reported on November 8, 2024 (H5N1)
Eurasian wigeon sample and environmental sample collected from Mai Po Nature Reserve reported on November 14, 2024 (H5N1)
Environmental samples collected from Mai Po Nature Reserve reported on November 13, 2026 (H5)
A sample of faecal droppings of live poultry taken from a poultry stall in Yan Oi Market in Tuen Mun reported on June 5, 2016 (H7N9)

Table 9. **Outside Hong Kong: Confirmed avian influenza A(H5) or other highly pathogenic avian influenza in poultry / wild birds / environmental samples reported in this week – number of reports for various subtypes of virus**
