

Reporting period: 30 September to 6 October 2007 (Week 40)

Weekly highlights

Human cases of avian influenza infection

- WHO reported on 2 October 2007 that the Ministry of Health of Indonesia announced a new case of human infection of H5N1 avian influenza. A 21-year-old male from Jakarta Province developed symptoms on 18 September, was hospitalized on 25 September and died in hospital on 28 September. The investigation found that the case was an egg seller in a traditional market. All of the contacts remain healthy, where they will continue to be monitored for ten days after their last contact with the case.

Places with human H5N1 infection and avian influenza in birds

Country	Human H5N1 infection*				Avian influenza in birds**				
	No. of case(s) during the reporting period	Date of last reported case(s)	Place(s) of last reported case(s)	Cumulative no. of cases Since Jan 2004 (No. of deaths)	No. of outbreak(s) during the reporting period (Subtype)	Date of last reported case(s)	Place(s)	Total no. affected (Destroyed)	Type of birds affected
Azerbaijan	0	11/04/06	Salyan	8 (5)	0 (H5N1)	23/03/06	Agdam	1(1)	Wild bird
