

Reporting period: 12 to 18 July 2009 (Week 29)

### Summary

1. The latest cases of avian influenza H5N1 in humans occurred in Egypt (confirmed by WHO on July 1).
2. In the past few years, about 100 cases of human AI infection were confirmed by the WHO annually, except 2008 where there were only 44 cases confirmed.
3. Cases occurred in the Western Pacific, South-East Asia and Eastern Mediterranean WHO regions. More cases were reported around January to March each year.

### This week's update

(as of 18 Jul 2009)		Confirmed human cases (deaths)	Wild birds/ poultry reports

**Avian Influenza Report** is a weekly report produced by the Respiratory Disease Office of the Centre for Health Protection as part of the Government's Preparedness Plan for Influenza Pandemic in Hong Kong. This report aims to highlight important international developments on avian influenza preparedness and control and to monitor global avian influenza activity in humans and birds.
