

Reporting period: 22 to 28 February 2009 (Week 9)

Summary

1. The most recent case of avian influenza H5N1 in humans occurred in Vietnam (confirmed by WHO on February 18).
2. In the past few years, about 100 cases of human AI infection were confirmed by the WHO annually, except 2008 where there were only 44 cases confirmed.
3. Cases occurred in the Western Pacific, South-East Asia and Eastern Mediterranean WHO regions. More cases were reported around January to March each year.

09/12/08	Indonesia	Riau	Riau	F	9	Alive
09/12/08	Indonesia	East Jakarta	Jakarta	F	2	Fatal

Avian Influenza Report is a weekly report produced by the Respiratory Disease Office of the Centre for Health Protection as part of the Government's Preparedness Plan for Influenza Pandemic in Hong Kong. This report aims to highlight important international developments on avian influenza preparedness and control and to monitor global avian influenza activity in humans and birds.
