

Avian Influenza Report

VOLUME 10, NUMBER 52

Reporting period: December 21 – December 27, 2014 (Week 52)
(Published on December 30, 2014)

Summary

1. There were no new human cases of avian influenza A(H5N1) reported by the World Health Organization (WHO).[#]
2. From 2008 to 2013, 32 to 73 confirmed human cases of avian influenza A(H5N1) were reported to WHO annually. In 2014 (as of December 27, 2014), 27 cases were reported by WHO[^].
3. During this reporting period, one confirmed human case of avian influenza A(H7N9) in Hong Kong was reported by the Centre for Health Protection of the Department of Health. This imported case is the first case in Hong Kong this winter and the eleventh case in Hong Kong. In addition, one confirmed human case of avian influenza A(H7N9) in Guangdong Province was reported by the Health and Family Planning Commission of Guangdong Province on December 30, 2014. Since March 2013 (as of December 30, 2014), there were a total of 471 cases reported.

[#] Since November 21, 2012, WHO only publishes information on human cases with avian influenza A(H5N1) infection on a monthly basis in "Influenza at human - animal interface: Monthly Risk Assessment Summary". Cases of human infection with H5N1 will only be reported in Disease Outbreak News for events that are unusual or associated with potential increased risks

[^] According to date of disease onset

This week's highlights

(as of December 30, 2014) (Sources: WHO, National Health and Family Planning Commission (NHFPC), Mainland health authorities, CHP and the World Organisation for Animal Health (OIE))

Table 1. Hong Kong: Confirmed human cases of avian influenza A(H5N1) / avian influenza A(H7N9)

	No. of H5N1 cases (No. of deaths)	No. of H7N9 cases (No. of deaths)	Details
In this reporting period	0(0)	1(0)	Hong Kong: A 68-year-old woman was confirmed positive for avian influenza A(H7N9). This imported case is the first confirmed case in Hong Kong this winter. The patient travelled to Bao'an, Shenzhen during the incubation period and had visited wet market there. She was admitted to Tuen Mun Hospital and is in critical condition. Investigations are ongoing. (CHP, December 29, 2014)

Table 2. Outside Hong Kong: Confirmed human cases of avian influenza A(H5N1)

	Place of occurrence	No. of cases (No. of deaths)	Details
In this reporting period	-	0(0)	-

For the cumulative no. of human cases by place, please refer to [WHO/WPRO](http://www.who.int/wpro) website.

Table 3. Outside Hong Kong: Confirmed cases of human infection with avian influenza A(H7N9)

	Place of occurrence	No. of cases (No. of deaths)	Province / Region / Municipality	City / District / Area	Age (years)	Sex	Condition at time of reporting	Date of report
New cases	China	1(0)	Guangdong	Shenzhen	35	F	Critical	30/12/2014

Table 4. Cumulative number of confirmed cases of human infection with avian influenza A(H7N9) since 2013

Confirmed H7N9 human cases have been reported in the following countries / areas		Cumulative no. of cases (471 cases in total) (as of December 30, 2014)
Mainland China and Hong Kong	Zhejiang Province	141
	Guangdong Province	112
	Jiangsu Province	59
	Shanghai Municipality	42
	Hunan Province	24
	Fujian Province	23
	Anhui Province	17
	Hong Kong [%]	11 ([%] all cases imported from Guangdong Province)
	Xinjiang Uygur Autonomous Region	8
	Jiangxi Province	8
	Shandong Province ⁺	5 (⁺ 1 case imported from Jiangsu Province)
	Beijing Municipality	5
	Henan Province	4
	Guangxi Province [@]	3 ([@] 1 case imported from Guangdong Province)
	Jilin Province	2
	Hebei Province	1
	Guizhou Province [#]	1 ([#] imported from Zhejiang Province)
Malaysia ^{&}		1 (^{&} imported from Guangdong Province)
Taiwan [*]		4 (*3 cases imported from Jiangsu Province and 1 case had travel history to Beijing and Jiangsu Province)

Table 5. Outside Hong Kong: Confirmed human cases of avian influenza A infections other than avian influenza A(H5N1 / H7N9) reported in the past 6 months

	Place of occurrence	No. of cases (No. of deaths)	Details
In this reporting period	China	1(0)	Avian influenza A(H5N6): □ Guangdong Province: On December 23, CHP was notified by the Health and Family Planning Commission of Guangdong Province of a human case of avian influenza A (H5N6) in Guangzhou. The patient is a 58-year-old man receiving treatment in a hospital in Guangzhou and is in critical condition. (http://www.info.gov.hk/gia/general/201412/23/P201412231044.htm)
Previously reported cases (in the past 6 months)	-	-	+-

Table 6. Hong Kong: Confirmed reports of avian influenza A(H5N1) or avian influenza A(H7N9) in poultry / wild birds since 2013

	No. of reports of H5N1 in poultry / wild birds	No. of reports of H7N9 in poultry / wild birds	Details
In this reporting period	0	0	-
Cumulative since 2013	1 ⁰	1 [#]	-

⁰ For further information, please visit the website of the Agriculture, Fisheries and Conservation Department

[#] Live poultry imported from Mainland tested positive for H7 avian influenza virus

Table 7. Outside Hong Kong: Confirmed avian influenza A(H5) or A(H7N9) in poultry / wild birds reported in this week

Places of occurrence	No. of reports of H5	No. of reports of H5N8	Details
Germany, Vietnam, Russia, Taiwan	2	2	<p>Germany: Samples from poultry in Niedersachsen State in Germany were tested positive for highly pathogenic avian influenza A(H5N8). (<i>OIE</i>, December 21, 2014)</p> <p>Vietnam: Samples from poultry in Quang Ngai Province in Vietnam were tested positive for highly pathogenic avian influenza A(H5). (<i>OIE</i>, December 22, 2014)</p> <p>Russia: Samples from birds in Respublika Sakha(Yakutia) in Russia were tested positive for highly pathogenic avian influenza A(H5N8). (<i>OIE</i>, December 25, 2014)</p> <p>Taiwan: Samples from poultry in Yilan County in Taiwan were tested positive for low pathogenic avian influenza A(H5). (<i>OIE</i>, December 26, 2014)</p>

For cumulative reports of avian influenza A(H5N1) or A(H7N9) in poultry / wild birds, please refer to the [OIE](#) website.

Table 8. Confirmed human cases of avian influenza A(H5N1) reported to WHO since 2003 (by onset date) [§]

	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	Overall
Cases	4	46	98	115	88	44	73	48	62	32	39	27	676
Deaths	4	32	43	79	59	33	32	24	34	20	25	13	398
Case Fatality Rate	100 %	69.6 %	43.9 %	68.7 %	67.0 %	75.0 %	43.8 %	50.0 %	54.8 %	62.5 %	64.1%	48.1%	58.9%

[§] Further breakdown by countries is available at [WHO](#) website

Table 9. Countries / areas with documented avian influenza A H5N1, H7N9 or other highly pathogenic avian influenza cases in the recent 6 months (including infections in birds/humans and relevant environmental samples) (Sources: WHO, OIE, NHFPC and official websites; **Blue color: Avian influenza A(H7N9) affected area (may also include other non-H5N1 highly pathogenic avian influenza A); Red color: Avian influenza A(H7N9) and avian influenza A(H5N1) affected area (may also include other non-H5N1 highly pathogenic avian influenza A)**) * Most recent occurrence in that country / area. (as of December 30, 2014)

Italics: Not listed as an affected area because the case was imported.

Country/ Area	Date of last report	Human cases	Poultry cases/	Wild bird cases
Canada	19/12/2014	N	Y* ⁱ	N

ⁱ On 19 December 2014, OIE reported that poultry samples in Canada were tested positive for highly pathogenic avian influenza A(H5N2).

ⁱⁱ On 4 December 2014, WHO reported confirmed 8 human cases of avian influenza A(H5N1) in Egypt.

ⁱⁱⁱ On 21 December 2014, OIE reported that a bird specimen in Germany tested positive for highly pathogenic avian influenza A(H5N8).

^{iv} On 21 December 2014, OIE reported that a bird specimen in Germany tested positive for highly pathogenic avian influenza A(H5N8).

^v On 18 December 2014, OIE reported that poultry specimens in India tested positive for highly pathogenic avian influenza A(H5N1).

^{vi} On 27 June 2014, WHO reported a confirmed human case of avian influenza A(H5N1) in Indonesia.

^{vii} On 16 December 2014, specimens from poultry in Italy tested positive for highly pathogenic avian influenza A(H5N8).

^{viii} On 29 December 2014, specimens from poultry in Japan tested positive for highly pathogenic avian influenza A(H5N8).

^{ix} On 26 December 2014, specimens from wild birds in Japan tested positive for highly pathogenic avian influenza A(H5N8).

^x On 3 December 2014, OIE reported that poultry specimens in the Netherlands tested positive for avian influenza A(H5N8).

^{xi} On 24 October 2014, OIE reported that poultry samples in Anhui Province were tested positive for highly pathogenic avian influenza A(H5N6).

^{xii} On 18 October 2014, CHP received notification from NHFPC regarding a human case of avian influenza A(H7N9) in Beijing.

^{xiii} On 24 October 2014, OIE reported that poultry samples in Chongqing municipality were tested positive for highly pathogenic avian influenza A(H5N6).

^{xiv} On 3 December 2014, CHP is closely monitoring an additional human case of avian influenza A(H7N9) in Fujian Province.

^{xv} On 24 October 2014, OIE reported that poultry samples in Fujian Province were tested positive for highly pathogenic avian influenza A(H5N6).

^{xvi} On 30 December 2014, CHP received notification from the Health and Family Planning Commission of Guangdong Province regarding a confirmed human case of avian influenza A(H7N9) in Guangdong Province.

^{xvii} On 24 October 2014, OIE reported that poultry samples in Guangdong province were tested positive for highly pathogenic avian influenza A(H5N1).

^{xviii} On 24 October 2014, OIE reported that poultry samples in Guangdong province were tested positive for highly pathogenic avian influenza A(H5N6).

^{xix} On 24 October 2014, OIE reported that poultry samples in Guangxi Zhuang Autonomous Region were tested positive for highly pathogenic avian influenza A(H5N1).

^{xx} On 24 October 2014, OIE reported that poultry samples in Guangxi Zhuang Autonomous Region were tested positive for highly pathogenic avian influenza A(H5N2).

^{xxi} On 24 October 2014, OIE reported that poultry samples in Guangxi Zhuang Autonomous Region were tested positive for highly pathogenic avian influenza A(H5N6).

^{xxii} On 24 October 2014, OIE reported that poultry samples in Guizhou province were tested positive for highly pathogenic avian influenza A(H5N1).

^{xxiii} On 24 October 2014, OIE reported that poultry samples in Guizhou province were tested positive for highly pathogenic avian influenza A(H5N6).

^{xxiv} On 1 September 2014, highly pathogenic avian influenza A(H5N6) was reported in poultry in Heilongjiang Province, China, by the Ministry of Agriculture in China.

^{xxv} On 24 October 2014, OIE reported that poultry samples in Heilongjiang province were tested positive for highly pathogenic avian influenza A(H5N2).

^{xxvi} On 24 October 2014, OIE reported that poultry samples in Heilongjiang province were tested positive for highly pathogenic avian influenza A(H5N6).

^{xxvii} On 24 October 2014, OIE reported that poultry samples in Hebei province were tested positive for highly pathogenic avian influenza A(H5N6).

^{xxviii} On 9 July 2014, avian influenza A(H7N9) was detected in a market in Henan Province.

^{xxix} On 27 December 2014, CHP confirmed an imported human case of avian influenza A(H7N9) in Hong Kong.

^{xxx} On 24 October 2014, OIE reported that poultry samples in Hubei province were tested positive for highly pathogenic avian influenza A(H5N2).

^{xxxi} On 24 October 2014, OIE reported that poultry samples in Hubei province were tested positive for highly pathogenic avian influenza A(H5N6).

^{xxxii} On 7 June 2014, CHP is closely monitoring an additional human case of avian influenza A(H7N9) in Hunan Province according to the latest report of the Mainland health authority.

^{xxxiii} On 24 October 2014, OIE reported that poultry samples in Hunan province were tested positive for highly pathogenic avian influenza A(H5N1).

^{xxxiv} On 24 October 2014, OIE reported that poultry samples in Hunan province were tested positive for highly pathogenic avian influenza A(H5N3).

^{xxxv} On 24 October 2014, OIE reported that poultry samples in Hunan province were tested positive for highly pathogenic avian influenza A(H5N6).

^{xxxvi} On 22 December 2014, CHP received notification from NHFPC regarding an additional human case of avian influenza A(H7N9) in Jiangsu Province.

^{xxxvii} On 24 October 2014, OIE reported that poultry samples in Jiangsu province were tested positive for highly pathogenic avian influenza A(H5N1).

^{xxxviii} On 24 October 2014, OIE reported that poultry samples in Liaoning province were tested positive for highly pathogenic avian influenza A(H5N8).

^{xxxix} On 24 October 2014, OIE reported that poultry samples in Ningxia Hui Autonomous Region were tested positive for highly pathogenic avian influenza A(H5N2).

^{xl} On 24 October 2014, OIE reported that poultry samples in Qinghai province were tested positive for highly pathogenic avian influenza A(H5N1).

^{xli} On 4 June 2014, CHP was notified by NHFPC regarding two human cases of avian influenza A(H7N9) in Shandong Province.

^{xlii} On 6 December 2014, CHP is closely monitoring an additional human case of avian influenza A(H7N9) in Shanghai.

^{xliii} On 24 October 2014, OIE reported that poultry samples in Tibet Autonomous Region were tested positive for highly pathogenic avian influenza A(H5N1).

^{xliiv} On 24 October 2014, OIE reported that poultry samples in Tibet Autonomous Region were tested positive for highly pathogenic avian influenza A(H5N2).

^{xli v} On 24 October 2014, OIE reported that poultry samples in Tibet Autonomous Region were tested positive for highly pathogenic avian influenza A(H5N6).

^{xli vi} On 22 December 2014, CHP received notification from NHFPC regarding 4 additional human cases of avian influenza A(H7N9) in Xinjiang Uygur Autonomous Region.

^{xli vii} On 24 October 2014, OIE reported that poultry samples in Yunnan Province were tested positive for highly pathogenic avian influenza A(H5N1).

^{xli viii} On 24 October 2014, OIE reported that poultry samples in Yunnan Province were tested positive for highly pathogenic avian influenza A(H5N6).

^{xli ix} On 22 December 2014, CHP was notified by NHFPC regarding 2 human cases of avian influenza A(H7N9) in Zhejiang Province.

^l On 24 October 2014, OIE reported that poultry samples in Zhejiang Province were tested positive for highly pathogenic avian influenza A(H5N6).

ⁱ On 25 September 2014, highly pathogenic avian influenza A(H5N8) was reported a poultry farm in the Republic of Korea.

ⁱⁱ On 30 September 2014, village birds in Russia tested positive for highly pathogenic avian influenza A(H5N1).

ⁱⁱⁱ On 25 December 2014, OIE reported that a bird in Russia tested positive for highly pathogenic avian influenza A(H5N8).

^{iv} On 17 November 2014, OIE reported that poultry samples in the United Kingdom tested positive for highly pathogenic avian influenza A(H5N8).

^v On 19 December 2014, OIE reported that poultry samples in the United States tested positive for highly pathogenic avian influenza A(H5N8).

^{vi} On 16 December 2014, OIE reported that wild bird samples in the United States tested positive for highly pathogenic avian influenza A(H5N2) and highly pathogenic avian influenza A(H5N8), respectively.

^{vii} On 22 December 2014, highly pathogenic avian influenza A(H5) was reported in poultry in Vietnam.

Table 10. Confirmed human cases of avian influenza A(H5N1) reported to WHO since 2003

Country	Cumulative no. of cases (December 2003 to December 2014)	No. of recent cases (September to December 2014)
Azerbaijan	8	0
Bangladesh	7	0
Cambodia	56	0
Canada	1	0
China	47	0
Djibouti	1	0
Egypt	185	9
Indonesia	197	0
Iraq	3	0
Laos	2	0
Myanmar	1	0
Nigeria	1	0
Pakistan	3	0
Thailand	25	0
Turkey	12	0
Vietnam	127	0
Overall	676	9

Table 11. Details of the recent confirmed human cases of avian influenza A(H5N1) reported to WHO (September to December 2014) (Sources: WHO)

Date of report by WHO	Country	Province / Region	District / City	Sex	Age	Outcome at the time of reporting
2/10/2014	Egypt	Giza	-	F	2.5	-
4/12/2014	Egypt	Menia	-	M	3	-
