

Avian Influenza Report

VOLUME 11, NUMBER 43

Reporting period: October 18, 2015 – October 24, 2015 (Week 43)

(Published on October 27, 2015)

Summary

1. There were no new human cases of avian influenza A(H5N1) reported by the World Health Organization (WHO).[#]
2. From 2010 to 2014, 32 to 62 confirmed human cases of avian influenza A(H5N1) were reported to WHO annually (according to onset date). In 2015 (as of October 24), 143 cases were reported by WHO* (according to onset date).
3. Since the previous issue of Avian Influenza Report, there were no human cases of avian influenza A(H7N9). Since March 2013 (as of October 24, 2015), there were a total of 679 cases reported globally. In the third wave from November 2014 to June 2015, 217 cases were reported in the Mainland. Since October 2015 (as of October 24), two human cases of avian influenza A(H7N9) have been reported in the Mainland.

[#] Since November 21, 2012, WHO only publishes information on human cases with avian influenza A(H5N1) infection in “[Influenza at human - animal interface: Monthly Risk Assessment Summary](#)”. Only cases of human infection with H5N1 involved in events that are unusual or associated with potential increased risks will be reported in Disease Outbreak News.
