

Avian Influenza Report

Avian Influenza Report is a weekly report produced by the Respiratory Disease Office, Centre for Health Protection of the Department of Health. This report highlights global avian influenza activity in humans and birds.

VOLUME 12, NUMBER 45

Reporting period: October 30, 2016 – November 5, 2016 (Week 45)

(Published on November 8, 2016)

Summary

1. Since the previous issue of Avian Influenza Report (AIR), there were no new human cases of avian influenza A(H7N9). Since March 2013 (as of November 5, 2016), there were a total of 798 human cases of avian influenza A(H7N9) reported globally. Since October 2015 (as of November 5, 2016), 118 cases have been recorded in Mainland China. The latest case was reported on August 12, 2016.
2. Since the previous issue of AIR, there were no new human cases of avian influenza A(H5N6). Since 2014 (as of November 5, 2016), 14 human cases of avian influenza A(H5N6) were reported to the World Health Organization (WHO) and all occurred in Mainland China. The latest case was reported on June 8, 2016.
3. There were no new human cases of avian influenza A(H5N1) reported by WHO. From 2011 to 2015, 32 to 145 confirmed human cases of avian influenza A(H5N1) were reported to WHO annually (according to onset date). In 2016, there have been 10 cases in Egypt so far.*

* Since November 21, 2012, WHO only publishes information on human cases with avian influenza A(H5N1) infection in "[Influenza at human - animal interface: Monthly Risk Assessment Summary](#)". Only cases of human infection with H5N1 involved in events that are unusual or associated with potential increased risks will be reported in Disease Outbreak News. The latest [report](#) was published in October, 2016.

This week's highlights
