8 February 2011

Dear Managers / Infection Control Officer,

Update on Influenza Situation

Hong Kong is in the winter influenza peak season. Most recent surveillance data showed that the influenza activity in Hong Kong continued to increase. In the past two weeks, there was marked increase in number of influenza isolates detected by our Public Health Laboratory Centre. Influenza-like-illness consultation rates at sentinel government out-patient clinics and general practitioners remained at a high level. Besides, the number of ILI outbreaks occurring institutions and schools also increased from eighteen in the week ending January 15, 2011 to 59 and 55 in the weeks ending January 22 and January 29 respectively. The majority (about 90%) of influenza viruses isolated in the recent two weeks were influenza A (H1N1) 2009 (i.e. human swine influenza), while influenza A (H3N2) and influenza B viruses each constituted about 5%.

In this regard, I would like to urge you to stay vigilant and implement prompt preventive measures against influenza and other respiratory infections at your institution/organization. Young children, elderly people and patients with chronic diseases are more prone to influenza infection and its complications. As institutions and organizations are collective assembly places, infectious diseases like influenza could be easily spread among people through their daily contact. Sources of infection could come from staff, visitors or clients (especially those just discharged from hospitals).

To prevent outbreaks of influenza or other respiratory infections, clients/staff with acute febrile illness should not attend institution/organization till 48 hours after fever has subsided. Besides, residents with fever and respiratory symptoms should be promptly isolated.

In addition, the following measures are advised:

- Build up good body immunity by having a proper diet, regular

- exercise and adequate rest, reducing stress and avoiding smoking;
- Maintain good personal and environmental hygiene;
 - Keep hands clean and wash hands properly;
 - Cover nose and mouth while sneezing or coughing and dispose of nasal and mouth discharge properly;
 - Wash hands after sneezing, coughing or cleaning the nose;
 - Maintain good ventilation;
 - Avoid visiting crowded places with poor ventilation, especially during influenza season; and
 - Wear surgical mask and seek medical advice promptly if symptoms of respiratory tract infection or fever develop.

You are reminded to monitor the sick leave pattern among your clients and staff, and report promptly to our Central Notification Office (Tel: 2477-2772; Fax: 2477-2770) if there is a suspected outbreak of respiratory infection in your institution/organization. For the latest information on influenza activity, please visit the website of the Centre for Health Protection (www.chp.gov.hk).

Yours faithfully,

(Dr. S K CHUANG)
for Controller
