

# Avian Influenza Report

*Avian Influenza Report* is a weekly report produced by the Respiratory Disease Office, Centre for Health Protection of the Department of Health. This report highlights global avian influenza activity in humans and birds.

## VOLUME 15, NUMBER 33

Reporting period: August 11, 2019 –August 17, 2019 (Week 33)

(Published on August 20, 2019)

### Summary

1. Since the previous issue of Avian Influenza Report (AIR), there were no new human cases of avian influenza A(H7N9). Since March 2013 (as of August 17, 2019), there were a total of 1568 human cases of avian influenza A(H7N9) reported globally (including 1567 cases in the past six waves). The latest case was reported on April 5, 2019.
2. Since the previous issue of AIR, one confirmed human case of avian influenza A(H5N6) from Beijing Municipality was reported by the National Health Commission (NHC). Since 2014 (as of August 19, 2019), there were 24 human cases of avian influenza A(H5N6) reported globally and all occurred in Mainland China.
3. Since the previous issue of AIR, there were no new human cases of avian influenza A(H5N1). From 2011 to 2017, 4 to 145 confirmed human cases of avian influenza A(H5N1) were reported to World Health Organization (WHO) annually (according to onset date).\* The latest case was reported on April 30, 2019.

\* Since November 21, 2012, WHO only publishes information on human cases with avian influenza A(H5N1) infection in “[Influenza at human - animal interface: Monthly Risk Assessment Summary](#)”. Only cases of human infection with H5N1 involved in events that are unusual or associated with potential increased risks will be reported in Disease Outbreak News. The latest [report](#) was published in June, 2019.
