

Avian Influenza Report

Avian Influenza Report is a weekly report produced by the Surveillance Division of the Communicable Disease Branch of the Centre for Health Protection. This report highlights global avian influenza activity in humans and birds.

VOLUME 19, NUMBER 10

Reporting period: Mar 5, 2023 – Mar 11, 2023 (Week 10)

(Published on March 14, 2023)

Summary

1. Since the previous issue of Avian Influenza Report (AIR), there were no new human cases of avian influenza A(H7N9). Since March 2013 (as of March 11, 2023), there were a total of 1568 human cases of avian influenza A(H7N9) reported globally (all were reported in the seven waves between 2013 and September 2019). The latest case was reported on April 5, 2019.
2. Since the previous issue of AIR, there were no new human cases of avian influenza A(H5N6). Since 2014 (as of March 11, 2023), there were 84 human cases of avian influenza A(H5N6) reported globally and 83 of them occurred in Mainland China. The latest case was reported on February 28, 2023.
3. Since the previous issue of AIR, there were no new human cases of avian influenza A(H5N1). From 2013 to 2022, 0 to 145 confirmed human cases of avian influenza A(H5N1) were reported to the World Health Organization (WHO) annually (according to onset date).* The latest case was reported on March 7, 2023.

* Since November 21, 2012, WHO only publishes information on human cases with avian influenza A(H5N1) infection in “[Influenza at human – animal interface: Monthly Risk Assessment Summary](#)”. Only cases of human infection with H5N1 involved in events that are unusual or associated with potential increased risks will be reported in Disease Outbreak News. The latest [report](#) was published in February, 2023.

This week's highlights

	pathogenic avian influenza A(H5N1).	
Panama	Samples from birds in Veraguas, Panamá Oeste, Colón and Panamanian Exclusive Economic Zone were tested positive for highly pathogenic avian influenza A(H5N1).	March 8, 2023
South Africa	Samples from poultry and birds in Western Cape, Gauteng, KwaZulu-Natal and Free State were tested positive for highly pathogenic avian influenza A(H5N1).	March 8, 2023
	Samples from birds in Eastern Cape, Mpumalanga, North West and Limpopo were tested positive for highly pathogenic avian influenza A(H5N1).	March 8, 2023
Taiwan	Samples from poultry in Tainan City, Changhua County, Yunlin County, Pingtung County, Chiayi County and Yilan County were tested positive for highly pathogenic avian influenza A(H5N1).	March 8, 2023
United Kingdom	Samples from birds in Isle of Man and Northern Ireland were tested positive for highly pathogenic avian influenza A(H5N1).	March 8, 2023 March 10, 2023
	Samples from poultry and birds in Scotland, England and Wales were tested positive for highly pathogenic avian influenza A(H5N1).	March 10, 2023
Canada	Samples from poultry and birds in Nova Scotia, Saskatchewan, Québec, Ontario, British Columbia, Alberta, Manitoba and New Brunswick were tested positive for highly pathogenic avian influenza A(H5N1).	March 9, 2023
	Samples from birds in Prince Edward Island, Newfoundland and Labrador, Northwest Territories and Nunavut were tested positive for highly pathogenic avian influenza A(H5N1).	March 9, 2023
Cuba	Samples from birds in Ciudad de la Habana were tested positive for highly pathogenic avian influenza A(H5N1).	March 9, 2023
Faroe Islands	Samples from birds in Streymoyar, Sandoyar, Vågø, Norderøerne and Eysturoyar were tested positive for highly pathogenic avian influenza A(H5N1).	March 9, 2023
India	Samples from poultry in Jharkhand were tested positive for highly pathogenic avian influenza A(H5N1).	March 9, 2023

Places of Occurrence	Details	OIE Report Date
Switzerland	Samples from birds in Zürich, Vaud, Thurgau, Schaffhausen, Lucerne, Zug, Fribourg, Basel-Landschaft, Aargau, Basel-Stadt and Ticino were tested positive for highly pathogenic avian influenza A(H5N1).	March 9, 2023
United States of America	Samples from poultry and birds in Pennsylvania, Virginia, Wisconsin, Nebraska, New York, Washington, Iowa, Kansas, Florida, New Hampshire, Michigan, California, Tennessee, South Dakota, Colorado, North Dakota, Idaho, Mississippi, Illinois, Kentucky, Minnesota, North Carolina, Missouri, Maryland, Oregon, Indiana, Texas, Delaware, Utah and Ohio were tested positive for highly pathogenic avian influenza A(H5N1).	March 9, 2023
	Samples from birds in Nevada, District of Columbia, Massachusetts, Wyoming, New Jersey, Oklahoma, Rhode Island, New Mexico, Montana, Arkansas, Connecticut, Maine, Georgia, Alaska and South Carolina were tested positive for highly pathogenic avian influenza A(H5N1).	March 9, 2023
Turkey	Samples from poultry in Denizli and Afyon were tested positive for highly pathogenic avian influenza A(H5N1).	March 10, 2023
Honduras	Samples from birds in Atlántida, Cortés and Honduran Exclusive Economic Zone were tested positive for highly pathogenic avian influenza A(H5N1).	March 12, 2023
Belgium	Samples from birds in Wallonie and Vlaanderen were tested positive for highly pathogenic avian influenza A(H5) and A(H5N1).	March 13, 2023
France	Samples from poultry in Normandie, Île-de-France, Bretagne, Occitanie, Centre-Val de Loire, Pays de la Loire, Nouvelle-Aquitaine, Hauts-de-France, Auvergne-Rhône-Alpes, Bourgogne-Franche-Comté, Provence-Alpes-Côte d'Azur and Grand Est were tested positive for highly pathogenic avian influenza A(H5N1).	March 13, 2023

For cumulative reports of avian influenza A(H5) or other highly pathogenic avian influenza in poultry / wild birds, please refer to the [OIE](#) website.
