

Avian Influenza Report

Avian Influenza Report is a weekly report produced by the Surveillance Division of the Communicable Disease Branch of the Centre for Health Protection. This report highlights global avian influenza activity in humans and birds.

VOLUME 22, NUMBER 19

Reporting period: May 3, 2026 – May 9, 2026 (Week 19)

(Published on May 12, 2026)

Summary

1. Since the previous issue of Avian Influenza Report (AIR), there were no new human cases of avian influenza A(H5N1). From 2016 to 2025, 0 to 81 confirmed human cases of avian influenza A(H5N1) were reported to the World Health Organization (WHO) annually (according to onset date).* The latest case was reported in late April 2026.
2. Since the previous issue of AIR, there was one new human case of avian influenza A(H5N6) from Chongqing Municipality reported by the World Health Organization (WHO) on May 8, 2026 (refer to Table 2 for details). Since 2014 (as of May 9, 2026), there were 94 human cases of avian influenza A(H5N6) reported globally and 93 of them occurred in the Chinese Mainland. The last case was reported on July 24, 2024.
3. Since the previous issue of AIR, there were no new human cases of avian influenza A(H7N9). Since March 2013 (as of May 9, 2026), there were a total of 1568 human cases of avian influenza A(H7N9) reported globally (all were reported in the seven waves between 2013 and September 2019). The latest case was reported on April 5, 2019.

* Since November 21, 2012, WHO only publishes information on human cases with avian influenza A(H5N1) infection in “[Influenza at human – animal interface: Monthly Risk Assessment Summary](#)”. Only cases of human infection with H5N1 involved in events that are unusual or associated with potential increased risks will be reported in Disease Outbreak News. The latest [report](#) was published in April 2026.
