Avian Influenza Report

Avian Influenza Report *is a weekly report produced by the Surveillance Division of the Communicable Disease Branch of the Centre for Health Protection. This report highlights global avian influenza activity in humans and birds.*

VOLUME 22, NUMBER 23
Reporting period: May 31, 2026 – June 6, 2026 (Week 23)
(Published on June 9, 2026)

Summary

1. Since the previous issue of Avian Influenza Report (AIR), there were two new human cases of avian influenza A(H5N1) from Bangladesh and India reported by the World Health Organization (WHO) in early June 2026 (refer to Table 2 for details). From 2016 to 2025, 0 to 81 confirmed human cases of avian influenza A(H5N1) were reported to the WHO annually (according to onset date).*

2. Since the previous issue of AIR, there were no new human cases of avian influenza A(H5N6). Since 2014 (as of June 6, 2026), there were 94 human cases of avian influenza A(H5N6) reported globally and 93 of them occurred in the Chinese Mainland. The latest case was reported on May 8, 2026.

3. Since the previous issue of AIR, there were no new human cases of avian influenza A(H7N9). Since March 2013 (as of June 6, 2026), there were a total of 1568 human cases of avian influenza A(H7N9) reported globally (all were reported in the seven waves between 2013 and September 2019). The latest case was reported on April 5, 2019.

* Since November 21, 2012, WHO only publishes information on human cases with avian influenza A(H5N1) infection in "Influenza at human – animal interface: Monthly Risk Assessment Summary". Only cases of human infection with H5N1 involved in events that are unusual or associated with potential increased risks will be reported in Disease Outbreak News. The latest report was published in June 2026.
