

Avian Influenza Report

Avian Influenza Report is a weekly report produced by the Surveillance Division of the Communicable Disease Branch of the Centre for Health Protection. This report highlights global avian influenza activity in humans and birds.

VOLUME 22, NUMBER 38

Reporting period: September 13, 2026 – September 19, 2026 (Week 38)

(Published on September 22, 2026)

Summary

1. Since the previous issue of Avian Influenza Report (AIR), there was one new human case of avian influenza A(H5N1) from Bangladesh reported by the World Health Organization (WHO) in mid-September 2026 (refer to Table 2 for details). From 2016 to 2025, 0 to 81 confirmed human cases of avian influenza A(H5N1) were reported to the World Health Organization (WHO) annually (according to onset date).*
2. Since the previous issue of AIR, there were no new human cases of avian influenza A(H5N6). Since 2014 (as of September 19, 2026), there were 94 human cases of avian influenza A(H5N6) reported globally and 93 of them occurred in the Chinese Mainland. The latest case was reported on May 8, 2026.
3. Since the previous issue of AIR, there were no new human cases of avian influenza A(H7N9). Since March 2013 (as of September 19, 2026), there were a total of 1568 human cases of avian influenza A(H7N9) reported globally (all were reported in the seven waves between 2013 and September 2019). The latest case was reported on April 5, 2019.

* Since November 21, 2012, WHO only publishes information on human cases with avian influenza A(H5N1) infection in “[Influenza at human – animal interface: Monthly Risk Assessment Summary](#)”. Only cases of human infection with H5N1 involved in events that are unusual or associated with potential increased risks will be reported in Disease Outbreak News. The latest [report](#) was published in September 2026.

This week's highlights

(Sources: World Health Organization (WHO), Overseas health authorities, National Health Commission (NHC) of the People's Republic of China, Chinese Mainland health authorities, Ministry of Agriculture of the People's Republic of China, Centre for Health Protection (CHP) and World Organisation for Animal Health (WOAH; Founded as OIE))

Table 1. Hong Kong: Confirmed human cases of avian influenza A(H5N1 / H5N6 / H7N9) since previous issue of AIR

	No. of H5 cases (No. of deaths)	No. of H7N9 cases (No. of deaths)	Details
In this reporting period	0(0)	0(0)	-

Table 2. Outside Hong Kong: Confirmed human cases of avian influenza A(H5N1 / H5N6 / H7N9) since previous issue of AIR

	Place of occurrence	No. of cases (No. of deaths)	Details
In this reporting period	Bangladesh	1(0)	Avian influenza A(H5N1) ▪ Rangpur Division: ▫ The case involved a child who developed symptoms on August 15, 2026 and was hospitalised on August 17. ▫ Epidemiological investigations revealed the case had exposure to household ducks and chickens, including some that were sick. ▫ No additional cases have been detected among close contacts of the case.

Table 3. Confirmed human cases of avian influenza A(H5N1) reported to WHO / Overseas health authorities / NHC since 2003 (by onset date) [§]

Year	Cases	Deaths	Case fatality rate
2003	4	4	100%
2004	46	32	69.6%
2005	98	43	43.9%
2006	115	79	68.7%
2007	88	59	67.0%
2008	44	33	75.0%
2009	73	32	43.8%
2010	48	24	50.0%
2011	62	34	54.8%
2012	32	20	62.5%

Year	Cases	Deaths	Case fatality rate
2013	39	25	64.1%
2014	52	22	42.3%
2015	145	42	29.0%
2016	10	3	30.0%
2017	4	2	50.0%
2018	0	0	0%
2019	1	1	100%
2020	1	0	0%
2021	2	1	50.0%
2022	6	1	16.7%
2023	12	4	33.3%
2024*	81	4	4.9%
2025	30	12	40.0%
2026	10	2	20.0%
Overall	1003	479	47.8%

[§] Further breakdown by countries is available at [WHO](https://www.who.int/) website

*Including laboratory-confirmed cases of avian influenza A(H5) reported by the United States Centers for Disease Control and Prevention (US CDC) in 2024.

Table 4. Confirmed human cases of avian influenza A(H5N1) reported to WHO / Overseas health authorities / NHC since 2003 (by date of reporting)

Countries /Areas	Cumulative no. of cases (November 2003 to September 2026)	No. of recent cases (May 2026 to September 2026)
Australia	1	0
Azerbaijan	8	0
Bangladesh	15	3
Cambodia	95	1

[#] The latest case imported from the Chinese Mainland

Table 7. Confirmed human cases of avian influenza A infections other than avian influenza A(H5N1 / H5N6 / H7N9) reported in the past 6 months (as of September 21, 2026)

	Place of occurrence	No. of cases (No. of deaths)	Details
In this reporting period	-	0(0)	-
Previously reported cases (onset/ reported in the past 6 months)	Chinese Mainland	20(0)	Avian influenza A(H9N2): ▪ Anhui Province: ▫ A three-year-old boy with onset on August 3, 2026. ▪ Beijing: ▫ A six-year-old girl with onset on August 15, 2026. ▪ Gansu Province: ▫ A three-year-old girl with onset on July

	Place of occurrence	No. of cases (No. of deaths)	Details
			11, 2026. ▪ Guangdong Province: ▫ A one-year-old girl with onset on June 12, 2026. ▫ A 44-year-old man with onset on June 26, 2026. ▪ Guangxi Zhuang Autonomous Region: ▫ A one-year-old boy with onset on April 12, 2026. ▫ A 64-year-old woman with onset on May 4, 2026. ▫ A two-year-old girl with onset on May 31, 2026. ▫ A four-year-old boy with onset on June 26, 2026. ▫ A two-year-old boy with onset on August 23, 2026. ▪ Jiangsu Province: ▫ A four-year-old boy with onset on June 22, 2026. ▫ A 12-year-old boy with onset on July 6, 2026. ▪ Jiangxi Province: ▫ A two-year-old boy with onset on March 20, 2026. ▫ A 72-year-old woman with onset on July 5, 2026. ▪ Sichuan Province: ▫ A three-year-old girl with onset on April 25, 2026. ▪ Yunnan Province: ▫ A two-year-old girl with onset on March 3, 2026. ▫ A three-year-old boy with onset on April 28, 2026. ▫ A four-year-old boy with onset on May 17, 2026. ▫ A 58-year-old woman with onset on July 13, 2026.

	Place of occurrence	No. of cases (No. of deaths)	Details
			□ A two-year-old girl with onset on July 28, 2026.
	Hong Kong, China	1(0)	Avian influenza A(H9N2): ▪ The case involved a two-year-old boy with onset on June 9, 2026. ▪ The patient was admitted for treatment on June 10, 2026, and has now recovered. ▪ Epidemiological investigations revealed the case likely had indirect exposure to contaminated environment at a fresh provision shop selling live poultry in a wet market. ▪ One sample collected from a metal tray placed at the bottom of a live chicken cage inside the shop for collecting chicken droppings tested positive for the H9 avian influenza virus. The remaining 16 environmental samples tested negative. ▪ Whole genome sequencing and analysis of the patient's clinical specimens confirmed that all of the virus genes were avian in origin and no significant genetic variations were detected. ▪ All identified contacts remained asymptomatic.
	Taiwan, China	1(0)	Avian influenza A(H7N7): ▪ Central Taiwan: □ A man in his 70s who worked in a poultry farm with onset on March 20, 2026. □ This is the first locally-acquired human case of avian influenza A(H7N7) reported in Taiwan, China.

Table 8. Hong Kong: Confirmed reports of avian influenza A(H5) or avian influenza A(H7N9) in poultry / wild birds / environmental samples since 2015

	No. of reports of H5 in poultry / wild birds / environmental samples	No. of reports of H7N9 in poultry / wild birds / environmental samples	Details
In this reporting period	0	0	-

	No. of reports of H5 in poultry / wild birds / environmental samples	No. of reports of H7N9 in poultry / wild birds / environmental samples	Details
