

### Sentinel surveillance infectious diseases data in Chinese Medicine Practitioner (CMP) weekly report

Column	Type	Description
year	Number	Year
week	Number	Week
from	Date (DD/MM/YYYY)	Start date of the week
to	Date (DD/MM/YYYY)	End date of the week
ili	Number	Influenza-like illness weekly consultation rates (per 1000 consultations)
add	Number	Acute diarrhoeal diseases weekly consultation rates (per 1000 consultations)

Notes: The weekly figures were calculated based on the information provided by CMPs participating in the Sentinel Surveillance of Infectious Diseases. They do not represent the situation at any particular clinic or geographic area.

#### Methodology

1. Sentinel CMPs at selected clinics record the total number of consultations and those fulfilling the case definition of disease conditions under surveillance. Records are sent to CHP on a weekly basis.
2. Disease conditions under surveillance by sentinel CMPs include:
  - Influenza-like illness (ILI)
  - Acute diarrhoeal diseases (ADD)
3. The CHP collects and collates data from all sentinel clinics weekly. The weekly consultation rate for each disease is generated by dividing the sum of cases reported by the CMPs by their sum of total number of consultations in the week.
