

Can I Have COVID-19 Vaccination?

The vast majority of us are suitable for COVID-19 vaccination

Receiving the COVID-19 vaccine can **boost our immunity against the novel coronavirus** and **effectively reduce the risk of severe disease and death.**

Citizens who have not completed the initial doses are recommended to **receive free vaccination as early as possible** for self protection.

The key to maintaining protection conferred by vaccine is to **receive suitable doses according to vaccination schedule**. High-risk individuals should **receive booster doses timely**.

Do not get vaccinated if you have the following contraindication(s)

mRNA COVID-19 Vaccine

X Allergy to the previous dose of mRNA COVID-19 vaccine or its vaccine component (unless advised by specialists in Immunology and Allergy)

Individuals receiving vaccination shall continue their medication

Examples

Hypertension

Diabetes

Cardiovascular diseases

Asthma

Chronic obstructive airway diseases

Chronic liver diseases

Autoimmune rheumatic diseases

Cancers

If stable
Should get vaccinated

Those in remission should get vaccinated
Those under active treatment should discuss with doctor on the timing
