

Report on Invasive Pneumococcal Disease

Invasive pneumococcal disease (IPD) has become a notifiable disease since 9 January 2015. Isolation of *Streptococcus pneumoniae* from a normally sterile site or detection of *Streptococcus pneumoniae* DNA from a normally sterile site of a clinically compatible case are considered as laboratory confirmation criteria for IPD.

Report on IPD is a monthly report produced by the Communicable Disease Branch of the Centre for Health Protection (CHP), the Department of Health (DH). It summarizes the surveillance findings of IPD cases reported to the CHP.

Reporting period: 1 - 31 July 2025 (information as of 11 August 2025)

Number of IPD reported during the reporting period: 5

Graph 1. Number of IPD reported from January 2015 to July 2025 by month

Graph 2. Number of IPD reported from January 2015 to July 2025 by age group

Table 1. Number of IPD cases by age group and type of specimen in this reporting period

Specimen	Age group						Total
	< 2 years	2 to 4 years	5 to 17 years	18 to 49 years	50 to 64 years	≥65 years	
Blood	0	0	0	0	1	2	3
Pleural fluid	0	0	2	0	0	0	2
Total	0	0	2	0	1	2	5

Table 2. Number of IPD cases by age group and serotype of *Streptococcus pneumoniae* in this reporting period

Serotype	Age Group						Total
	< 2 years	2 to 4 years	5 to 17 years	18 to 49 years	50 to 64 years	≥ 65 years	
3	0	0	1	0	0	1	2
8	0	0	0	0	1	0	1
14	0	0	0	0	0	1	1
19A	0	0	1	0	0	0	1
Total	0	0	2	0	1	2	5

Table 3. Serotypes of *Streptococcus pneumoniae* of reported IPD cases by year (including paediatric cases aged < 18 years shown in brackets)

Serotype		2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025 (up to 31/7)
Covered by PCV 13 / 15	1	0 (0)	0 (0)	1 (0)	0 (0)	0 (0)	0 (0)	0 (0)	0 (0)	0 (0)	0 (0)	0 (0)
