

Latest situation of COVID-19 (as of 13 November 2022)

The Centre for Health Protection (CHP) of the Department of Health (DH) today (13 November) announced the latest epidemic situation of COVID-19. As of 0.00am, 13 November 2022, the CHP was investigating 6108 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 1385 cases tested positive by nucleic acid tests and 4723 cases tested positive by rapid antigen tests (RATs) in the past 24 hours. Separately, 467 additional imported cases were reported, including 418 cases tested positive by nucleic acid tests and 49 cases tested positive by RATs. So far, Hong Kong has recorded a total of 1017922 and 968282 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 1005291 cases and 968282 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 7 to 13 November 2022, an average of 1609.6 cases by nucleic acid tests were reported per day, as compared with 1432.0 cases per day reported in the previous 7-day period from 31 October to 6 November 2022 (Figure 1(i)).

Note:

1. Specimen collection dates are used for cases without information of onset dates.
2. Cases still under investigation are excluded in Figure 2.
3. Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Note:

Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Table 1 shows the classification of cases reported since the 5th wave (since 31 December 2021).

Source of data: Data from the Centre for Health Protection of the Department of Health with available information on age and gender.

Among the specimens received by the Public Health Laboratory Services Branch (PHLSB) during 4 to 10 November for verification testing of local cases, about 0.1% and 88.4% of them (7-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5* (including suspected cases) of the Omicron mutant strain respectively.

Figure 5: Estimated proportion of Omicron mutant strain among local cases in the past 2 weeks

Note:

1. Related percentages are estimated from the specimens received by the PHLSB for verification testing of local cases.
2. Data may be subject to changes when there is new information available.

*Based on sampling by PHLSB for further characterisation, among specimens related to BA.4/BA.5 received from 31 October – 6 November 2022, 96.3% were BA.5. (to be updated weekly)

In addition, as of 0.00am, 13 November, PHLSB had identified 217 cases of sub-lineage XBB, 6 of XBD, 8 of BA.2.75.2, 7 of BA.4.6, 11 of BF.7 and 32 of BQ.1.1 among imported cases in Hong Kong, while 24 cases of sub-lineage XBB, 15 of XBD, 1 of BA.2.75.2, 1 of BF.7 and 31 of BQ.1.1 have also been detected among local cases.
