

Latest situation of COVID-19 (as of 13 January 2023)

The Centre for Health Protection (CHP) of the Department of Health (DH) today (13 January) announced the latest epidemic situation of COVID-19. As of 0.00am, 13 January 2023, the CHP was investigating 8032 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 1349 cases tested positive by nucleic acid tests and 6683 cases tested positive by rapid antigen tests (RATs) in the past 24 hours. Separately, 228 additional imported cases were reported, including 13 cases tested positive by nucleic acid tests and 215 cases tested positive by RATs. So far, Hong Kong has recorded a total of 1203925 and 1613782 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 1191294 cases and 1613782 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 7 to 13 January 2023, an average of 1913.3 cases by nucleic acid tests were reported per day, as compared with 3179.4 cases per day reported in the previous 7-day period from 31 December 2022 to 6 January 2023 (Figure 1(i)).

Source of data: Data from the Centre for Health Protection of the Department of Health with available information on age and gender.

Among the specimens received by the Public Health Laboratory Services Branch (PHLSB) during 4 to 10 January 2023 for verification testing of local cases, about 0% and 46.52% of them (7-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5* (including suspected cases) of the Omicron mutant strain respectively.

Figure 5: Estimated proportion of Omicron mutant strain among local cases in the past 2 weeks

Note:

1. Related percentages are estimated from the specimens received by the PHLSB for verification testing of local cases.
2. Data may be subject to changes when there is new information available.

*Based on sampling by PHLSB for further characterisation, among specimens related to BA.4/BA.5 received from 2 to 8 January 2023, 91.3% were BA.5. (to be updated weekly)

In addition, as of 0.00am, 13 January, PHLSB had identified 227 cases of sub-lineage XBB (including 1 case of XBB.1.5), 6 of XBD, 8 of BA.2.75.2, 7 of BA.4.6, 13 of BF.7 and 38 of BQ.1.1 among imported cases in Hong Kong, while 182 cases of sub-lineage XBB (including 2 cases of XBB.1.5), 18 of XBD, 1 of BA.2.75.2, 33 of BF.7 and 207 of BQ.1.1 have also been detected among local cases.
