

Latest situation of COVID-19 (as of 17 January 2023)

The Centre for Health Protection (CHP) of the Department of Health (DH) today (17 January) announced the latest epidemic situation of COVID-19. As of 0.00am, 17 January 2023, the CHP was investigating 3744 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 846 cases tested positive by nucleic acid tests and 2898 cases tested positive by rapid antigen tests (RATs) in the past 24 hours. Separately, 99 additional imported cases were reported, including 15 cases tested positive by nucleic acid tests and 84 cases tested positive by RATs. So far, Hong Kong has recorded a total of 1208434 and 1631779 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 1195803 cases and 1631779 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 11 to 17 January 2023, an average of 1335.1 cases by nucleic acid tests were reported per day, as compared with 2502.9 cases per day reported in the previous 7-day period from 4 to 10 January 2023 (Figure 1(i)).

Note:

1. Specimen collection dates are used for cases without information of onset dates.
2. Cases still under investigation are excluded in Figure 2.
3. Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Note:

Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Table 1 shows the classification of cases reported since the 5th wave (since 31 December 2021).

Source of data: Data from the Centre for Health Protection of the Department of Health with available information on age and gender.

Among the specimens received by the Public Health Laboratory Services Branch (PHLSB) during 8 to 14 January 2023 for verification testing of local cases, about 0% and 41.77% of them (7-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5* (including suspected cases) of the Omicron mutant strain respectively.

Figure 5: Estimated proportion of Omicron mutant strain among local cases in the past 2 weeks

Note:

1. Related percentages are estimated from the specimens received by the PHLSB for verification testing of local cases.
2. Data may be subject to changes when there is new information available.

*Based on sampling by PHLSB for further characterisation, among specimens related to BA.4/BA.5 received from 2 to 8 January 2023, 91.3% were BA.5. (to be updated weekly)

In addition, as of 0.00am, 17 January, PHLSB had identified 227 cases of sub-lineage XBB (including 1 case of XBB.1.5), 6 of XBD, 8 of BA.2.75.2, 7 of BA.4.6, 13 of BF.7 and 38 of BQ.1.1 among imported cases in Hong Kong, while 185 cases of sub-lineage XBB (including 3 cases of XBB.1.5), 18 of XBD, 1 of BA.2.75.2, 36 of BF.7 and 210 of BQ.1.1 have also been detected among local cases.
