

一劑疫苗 兩份保護

孕婦接種季節性流感疫苗

Single dose Double protection

Pregnant women receive seasonal influenza vaccination

孕婦體內的抗體可透過胎盤傳給胎兒。
孕婦接種流感疫苗可保護自己以及胎兒和初生嬰兒，
免受感染流感所帶來的嚴重後果。

Antibodies in the mother's body can be transferred to the foetus through the placenta. Receiving influenza vaccination can provide protection for the expectant mothers, their foetuses and newborn babies from the serious consequences of influenza infection.

請儘早接種流感疫苗

Please receive influenza vaccination early

在知情同意下，流感疫苗可與新冠疫苗同時接種。接種流感疫苗和新冠疫苗可減少住院的可能性及留醫的時間。

Influenza vaccine can be co-administered with COVID-19 vaccine under informed consent.

Receiving influenza vaccination and COVID-19 vaccination may reduce the likelihood of hospitalisation and length of stay.

18 歲或以上的接種者必須登記醫健通

Recipients aged 18 or above must register for eHealth
