## Scientific Committee on Vector-borne Diseases

### Vector-borne Diseases in Hong Kong

The Scientific Committee on Vector-borne Diseases (SCVBD) was set up to advise the Controller of the Centre for Health Protection in formulating preventive strategies and public health control measures against the threat of vector-borne diseases in Hong Kong. This paper serves to guide members in prioritizing the Committee's work in 2005.

2. Vector-borne diseases may be categorized into three groups, namely parasitic, bacterial and viral.

- (a) parasitic vector-borne diseases e.g. malaria, leishmaniasis
- (b) bacterial vector-borne diseases e.g. Lyme disease, typhus, plague
- (c) viral vector-borne diseases e.g. dengue fever, yellow fever, Japanese encephalitis, West Nile virus infection.

3. Various government departments have on-going surveillance and mosquito control programs in place for malaria, typhus, plague, dengue fever, Japanese encephalitis and West Nile virus infection. The number of notifications for some of the vector-borne diseases in Hong Kong in 2004 is summarized in the following table -

Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Total	
Plague	0	0	0	0	0	0	0	0	0	0	0	
Yellow fever	0	0	0	0	0	0	0	0	0	0	0	
Dengue fever	5	3	1	1	2	2	3	5	4	1	2	29
Japanese encephalitis *	-	-	-	-	-	-	1	0	0	1	1	3
Malaria	1	2	0	1	5	2	6	9	2	5	2	35

Typhus	0	0	1	0	0	4	3	2	1	1	3	15

\* notifiable since July 2004

4. Since the establishment in June 2004, the SCVBD has discussed the prevention and control of Japanese encephalitis and dengue fever. The Committee will prioritise topics for discussion during the year according to the incidence of a vector-borne diseases and its public health significance. We would also be proactive and consider disease(s) that might be introduced into Hong Kong. The SCVBD will therefore study West Nile virus, Rickettsial disease, malaria and yellow fever in the coming months.
